IMO MSC.428(98)

MARITIME CYBER RISK MANAGEMENT

IASME CONSORTIUM

MARITIME CYBER BASELINE

MARITIME CYBER BASELINE

IASME is launching a new certification that will help owners and operators of vessels of all sizes improve their cyber security. Just like IASME's other certification schemes, the Maritime Cyber Baseline is practical, affordable and full of clear guidance on how to achieve certification.

Security should not be a mystery

With IASME's Maritime Cyber Baseline it's always clear what you have to do to become compliant.

The scheme aims to put vessel owners and operators on the path to compliance in accordance with the IMO Maritime Cyber Risk Management guidelines.

IASME is famous for helping organisations meet compliance requirements and the Maritime Cyber Baseline is no exception - this new scheme will be affordable and accessible for all sizes of operators.

How the scheme works

The first stage of certification, is to complete the verified self-assessment using IASME's online platform. This stage involves answering a series of easy-to-understand questions.

For further assurance, the second stage involves an IASME assessor review of systems & processes and collating evidence to verify the answers provided to the questions within stage one. Once this has been completed and verified, you will be officially certified!

If you require any further assistance, you can get advice from an IASME Certification Body - these knowledgeable maritime cyber security experts can help make the required changes to systems and processes to ensure they meet compliance. They can also help you with the certification process itself.

About IASME Consortium

IASME was established in 2014 to offer practical and affordable cyber security certification. It now issues around 2,000 certifications per month to a range of certifications, including IASME Governance, IoT Security Assured, Counter Fraud Fundamentals. It is also the sole partner to operate the Cyber Essentials scheme on behalf of the UK government. IASME has a network of around 250 Certification Bodies who carry our assessments and offer guidance and support to clients.

The scheme has been developed by IASME with guidance and maritime cyber expertise from Infosec Partners Limited.
